

Slot-A

Short Answer Test

cloud Computing for
Big Data Analysis

- 1) Based on ondemand basis the users can access sharable resources like disk, servers.
1. On demand self Service
 2. Broad Network access
 3. Resource Pooling
 4. Rapid elasticity
- 2) 1983- computer connected to network (ARPANET)
 web 1.0 - static page used for development
 web 2.0 - dynamic page using HTML
 web 3.0 - Full ownership is given to end users
- 3) server Virtualization: Running multiple independent virtual OS on a single physical computer.
 cloud computing: Provides services like PaaS, SaaS-etc and it is a complete service delivery model.
 virtualization: It creates VM's on a single physical server. It is a technology that enables cloud computing
- 4) 1. Data Storage - secure storage and backups
 2. Security - Protects the data
 3. Network reconnected - high speed internet.
 4. Scalability - Allow cloud providers to quickly add or remove computing resources based on demand
- 5) IaaS - Provides servers storage - Infrastructure as a service
 Ex - AWS
 PaaS - Provides the platform for developers- Platform as a service
 Ex - Google App Engine.
 SaaS - Delivers ready-to use software - Software as a service
 Ex - Google Docs.
 XaaS - Anything as a service
 Ex - Dropbox.
