

EXP-12:

Title

Demonstration of Virtualization Using VMware Workstation (Type-2 Hypervisor) by Creating and Configuring a Virtual Machine

Aim

To demonstrate virtualization by installing **VMware Workstation (Type-2 Hypervisor)** on the host system and creating, configuring, and running a virtual machine with a guest operating system (Windows/Linux).

Procedure

1. Download and install **VMware Workstation** on the host computer.
2. Launch VMware Workstation after installation.
3. Click **Create a New Virtual Machine**.
4. Select the installation source (ISO image or installation media) for the guest operating system.
5. Choose the guest operating system type (Windows or Linux).
6. Specify the virtual machine name and storage location.
7. Allocate hardware resources such as:
 - Number of CPU cores
 - RAM
 - Virtual hard disk size
 - Network mode (NAT/Bridged/Host-Only)
8. Complete the virtual machine creation wizard.
9. Power on the virtual machine.
10. Install the guest operating system by following the installation wizard.
11. After installation, install **VMware Tools** for improved performance and device integration.
12. Verify that the virtual machine is functioning correctly by logging into the guest operating system.

Output:

Result

Successfully installed **VMware Workstation (Type-2 Hypervisor)**, created and configured a virtual machine, and installed the guest operating system. The virtual machine operated successfully with the allocated resources, demonstrating the concept of virtualization.
