

Title

Installation of VMware Workstation and Guest Operating System on a Windows Host Environment

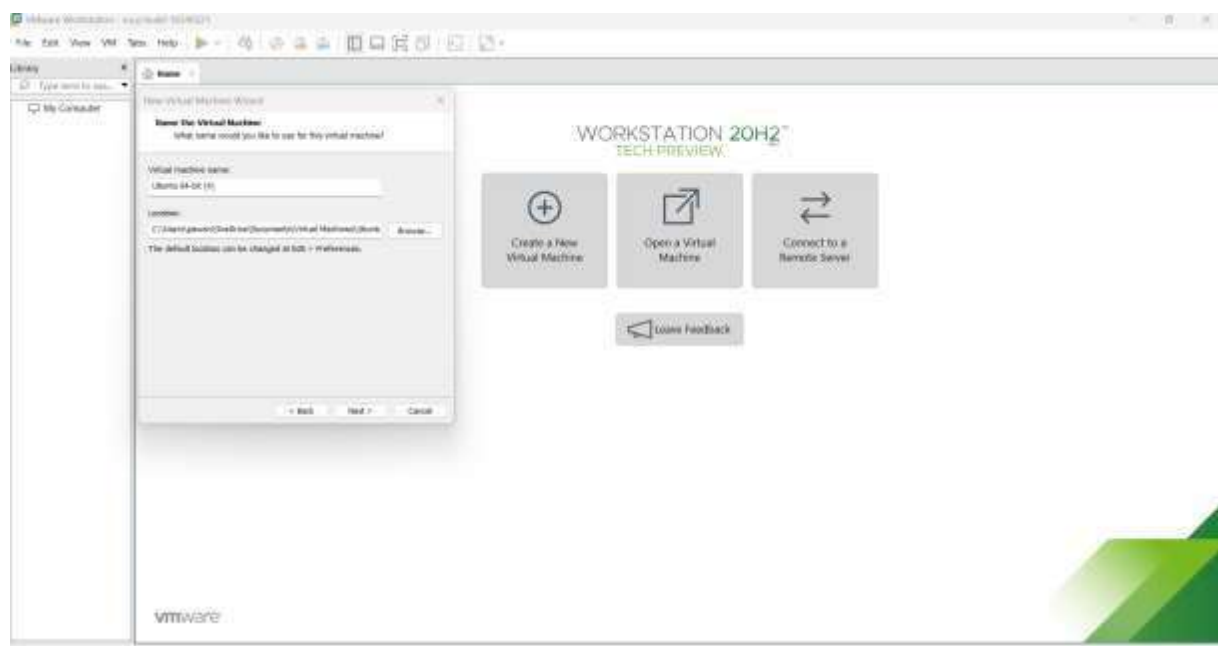

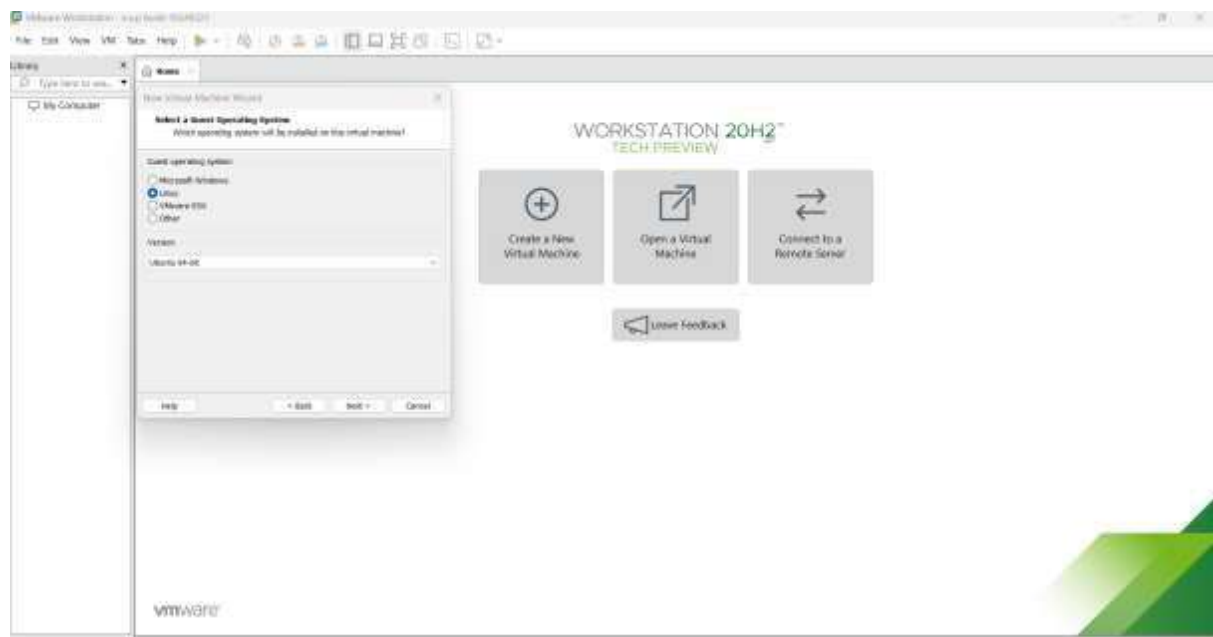

Aim

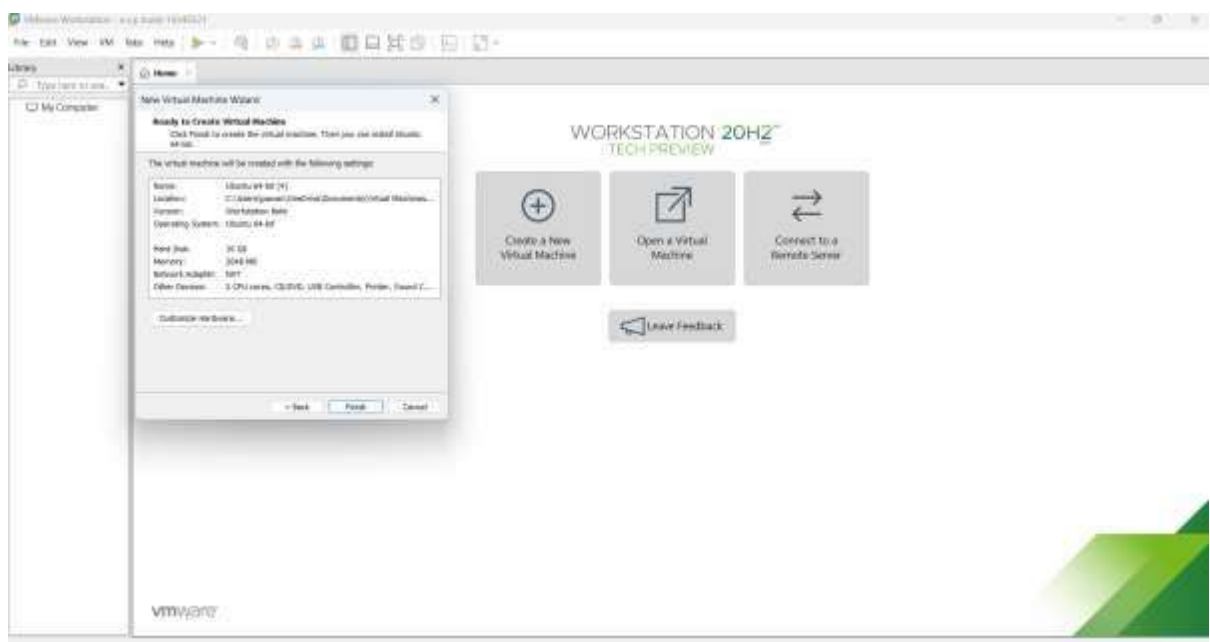

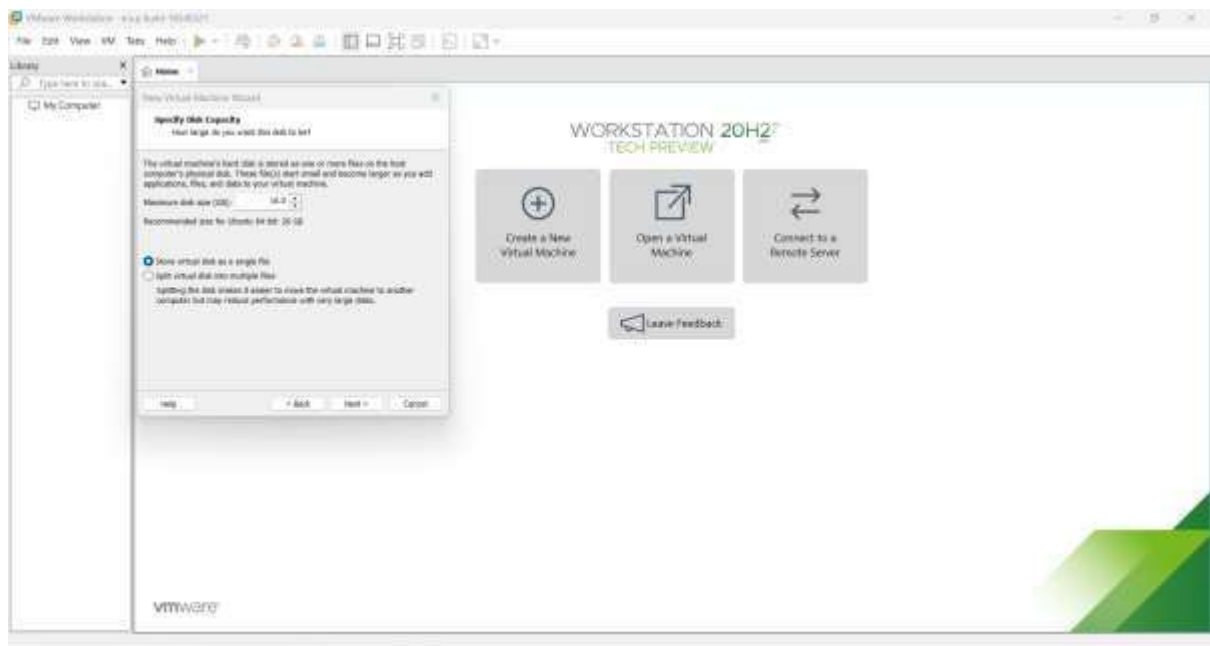

To install **VMware Workstation** on a Windows host system and install a different operating system (Windows/Linux) as a guest operating system using virtualization.

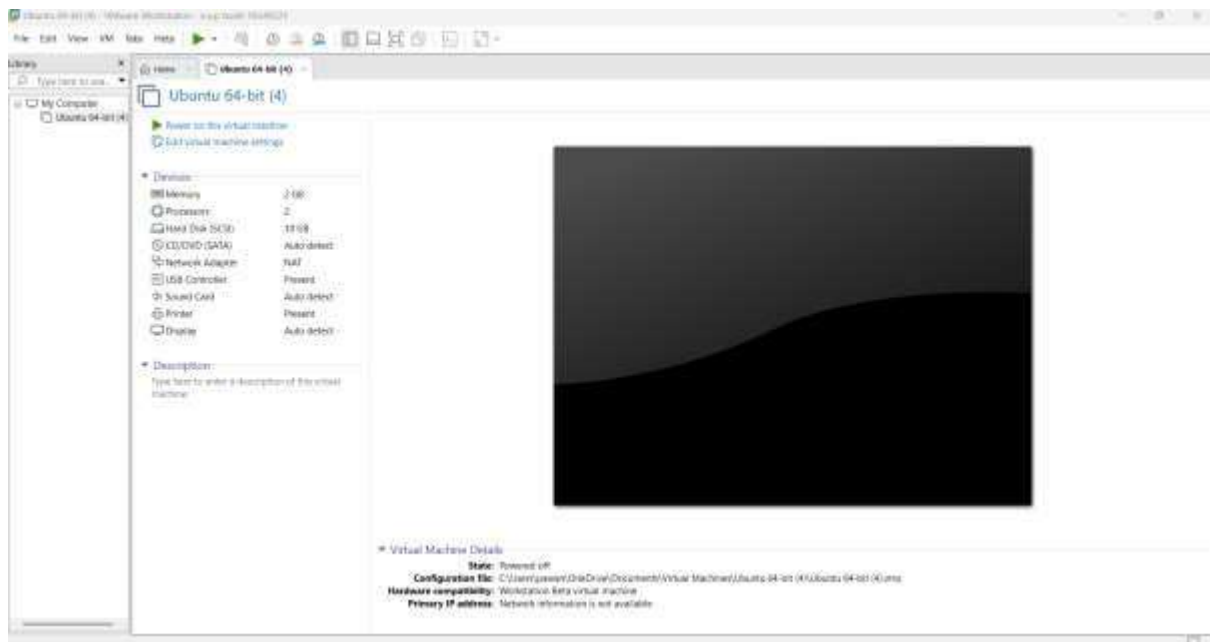

Procedure

1. Download and install **VMware Workstation** on the Windows host computer.
2. Launch VMware Workstation after successful installation.
3. Click **Create a New Virtual Machine**.
4. Select the guest operating system installation source (ISO image).
5. Choose the guest operating system (Windows or Linux).
6. Specify the virtual machine name and storage location.
7. Allocate system resources such as CPU cores, RAM, and virtual hard disk space.
8. Configure the network settings (NAT, Bridged, or Host-Only).
9. Complete the virtual machine setup.
10. Power on the virtual machine and install the guest operating system by following the installation wizard.
11. Install **VMware Tools** after the guest OS installation for enhanced performance and integration.
12. Restart the virtual machine and verify that the guest operating system runs successfully.

Output:

Result

Successfully installed **VMware Workstation** on the Windows host environment and installed a **Windows/Linux guest operating system** on a virtual machine. The guest operating system ran successfully, demonstrating virtualization using a Type-2 hypervisor.
